## FLUOROLINK ${ }^{\bullet}$ E10-H

■ Fluorolink ${ }^{\otimes}$ E10-H is a dialcohol terminated, ethoxylated derivative of Fluorolink ${ }^{\otimes}$ D10-H perfluoropolyether with the following chemical structure:

$$
\mathrm{HO}\left(\mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{O}\right)_{n} \mathrm{CH}_{2} \mathrm{CF}_{2} \mathrm{O}\left(\mathrm{CF}_{2} \mathrm{CF}_{2} \mathrm{O}\right)_{\mathrm{p}}\left(\mathrm{CF}_{2} \mathrm{O}\right)_{q} \mathrm{CF}_{2} \mathrm{CH}_{2}\left(\mathrm{OCH}_{2} \mathrm{CH}_{2}\right)_{n} \mathrm{OH}
$$

Thanks to its functional groups, Fluorolink ${ }^{\circledR}$ E10-H can be used to modify common polymers such as polyurethanes, polyester, epoxy, and coatings. Small amounts (0.5-2.0\%) are enough to improve the surface properties, typically the coefficient of friction, wear resistance, water and oil repellence of common materials. A higher amount imparts an exceptional chemical resistance to the corresponding materials, moreover Fluorolink ${ }^{\otimes}$ E10-H, thanks to the ethoxylated "spacer", exhibits a similar reactivity with respect to common hydrogenated oligomeric alcohols.
$\square$ Typical properties of Fluorolink ${ }^{\otimes}$ E10-H are as follows:

| Propermies | TYPICAL VALUES |
| :--- | :---: |
| Functional groups | ALCOHOL |
| Average equivalent weight (NMR) | 750 |
| Surface tension $\left(20^{\circ} \mathrm{C}\right)$ | 23 dynes $/ \mathrm{cm}$ |
| Fluorine content | $57 \%$ |
| Kinematic viscosity $\left(20^{\circ} \mathrm{C}\right)$ | 115 cSt |
| Refractive index $\mathrm{nD}_{20}$ | 1.317 |
| Specific gravity $\left(20^{\circ} \mathrm{C}\right)$ | $1.73 \mathrm{~g} / \mathrm{ml}$ |
| Glass transition | $-100^{\circ} \mathrm{C}$ |
| Appearance | Clear, light yellow liquid |
